

# HSTD12 - Development and Application of Semiconductor Tracking Detectors

Proceedings of the 12th International "Hiroshima" Symposium on the Development and Application of Semiconductor Tracking Detectors (HSTD12)  
15 - 18 December 2019  
International Conference Center Hiroshima, Hiroshima, Japan

**12<sup>th</sup> International "Hiroshima" Symposium on the Development and Application of Semiconductor Tracking detectors (HSTD12)**  
*International Conference Center Hiroshima, Hiroshima, Japan, Dec. 15-18, 2019*

**KEY DATES:**  
Abstract submission: 15 July - 2 Sep.  
Registration: 15 July - 15 Oct. (Early) - 15 Nov.  
<https://indico.cern.ch/event/803258/>  
For further information – email: [hstd@ml.post.kek.jp](mailto:hstd@ml.post.kek.jp)

**TOPICS:**  
Simulations  
Technologies  
Pixel and Strip Sensors  
Radiation Tolerant Materials  
ASICs  
Large Scale Applications  
Applications in Biology, Astrophysics, Medicine, ...  
New Ideas and Future Applications

**International Advisory Committee:**  
P. Allport (Univ. Birmingham, UK)  
N. Cartiglia (INFN Torino, Italy)  
M. Garcia-Sciveres (LBNL, Berkeley, US)  
G. Hall (Imperial College, London, UK)  
S.C. Lee (Academia Sinica, Taipei, Taiwan)  
T. Ohsugi (Hiroshima Univ., Japan)  
A. Seiden (Univ. California, Santa Cruz, US)  
T. Takahashi (Univ. Tokyo, Kashiwa, Japan)

**Local Organizers:**  
Y. Fukazawa (Chair, Hiroshima)  
T. Mizuno (Hiroshima)  
T. Ohsugi (Hiroshima)  
H. Takahashi (Hiroshima)  
Y. Unno (KEK)

**Organizing Committee:**  
Y. Fukazawa (Hiroshima)  
S. Hou (Academia Sinica)  
X. Lou (IHEP)  
H. F.-W. Sadrozinski (UC Santa Cruz)  
Y. Unno (Chair, KEK)

**Sponsors & Supporters:**  
Hamamatsu Photonics  
Hirhosima Univ.  
Hayashi-Repic, Acrorad  
SOI Consortium  
C&A

**Logos:** HAMAMATSU PHOTON IS OUR BUSINESS, CORE-U, HR, ACRORAD, SOPIX, C&A

Guest editors  
Yoshinobu Unno (managing guest editor)  
*KEK, Tsukuba, Japan*  
Yasushi Fukazawa  
*Hiroshima University, Higashi-Hiroshima, Japan*  
Suen Hou  
*Academia Sinica, Taipei, Taiwan*  
Luise Poley  
*Simon Fraser University, Vancouver, Canada*  
Hartmut F.-W. Sadrozinski  
*University of California, Santa Cruz, CA, USA*  
Hongbo Zhu  
*IHEP, Chinese Academy of Sciences, Beijing, China*

### **Section I. Technologies and Simulations**

The TSV Process in the Hybrid Pixel Detector for the High Energy Photon Source	Jie Zhang	D-20-00027
A Reconfigurable CMOS Sensor for Tracking, Pre-Shower and Digital Electromagnetic Calorimetry	Phil Allport	D-20-00030
Design and hardware evaluation of the optical-link system for the ATLAS Liquid Argon Calorimeter Phase-II Upgrade	Tiankuan Liu	D-20-00032
Optical transceivers for event triggers in the ATLAS phase-I upgrade	Suen Hou	D-20-00058
AC-coupled n-in-p pixel detectors on MCz silicon with atomic layer deposition (ALD) grown thin film	Akiko Gädda	D-20-00061
Process Quality Control Strategy for the Phase-2 Upgrade of the CMS Outer Tracker and High Granularity Calorimeter	Viktoria Hinger	D-20-00089
Design of large scale sensors in 180nm CMOS process modified for radiation tolerance	Leyre Flores Sanz de Acedo	D-20-00096
Novel Strategies for Fine-Segmented Low Gain Avalanche Diodes	Giovanni Paternoster	D-20-00119

### **Section II. Pixel sensors for tracking**

Design, electrical properties and fabrication method study of a novel 3D-Compound-Shell-Electrode silicon detector	Manwen Liu	D-20-00013
Commissioning and performance of the Belle II pixel detector	Hua Ye	D-20-00040
Commissioning of the upgraded ALICE Inner Tracking System	Svetlana Kushpil	D-20-00041
Radiation Resistant Innovative 3D Pixel Sensors for the CMS Upgrade at the High Luminosity LHC	Marco Meschini	D-20-00055
Particle tracking and radiation field characterization with Timepix3 in ATLAS	Thomas Billoud	D-20-00059
Serial powering in four-chip prototype RD53A modules for Phase 2 upgrade of the CMS pixel detector	Vasilije Perovic	D-20-00062
Study of Interpad-gap of HPK 3.1 production LGADs with Transient Current Technique	Shudhashil Bharthuar	D-20-00069
Characterization of small-pixel passive CMOS sensors in 150 nm LFoundry technology using the RD53A readout chip	Yannick Dieter	D-20-00078
A new generation of radiation hard 3D pixel sensors for the ATLAS upgrade	Stefano Terzo	D-20-00079
Highly compact digital pixel structures developed for the CEPC vertex detector	Yang Zhou	D-20-00082
Development of Planar Pixel Sensors for the CMS Inner Tracker at the High-Luminosity LHC	Georg Steinbrueck	D-20-00083
DMAPS Monopix developments in large and small electrode designs	Christian Bepin	D-20-00084
The MuPix sensor for the Mu3e experiment	Alena Weber	D-20-00087
Test Results of ATLASPIX3 - A Reticle Size HVCMOS Pixel Sensor	Rudolf Schimassek	D-20-00088
Designed for Construction of Multi Chip Modules		
Topmetal-M: a novel pixel sensor for compact tracking applications	Chengxin Zhao	D-20-00090
Vertex and Tracking Detector R&D for CLIC	Magdalena Munker	D-20-00091
3D Trenched-Electrode Pixel Sensors: design, technology and initial results	Giulio Tiziano Forcolin	D-20-00092
New Pixel Detector Concept 'DuTiP' for Belle II Upgrade and the ILC with an SOI Technology	Akimasa Ishikawa	D-20-00106

Monolithic CMOS sensors for sub-nanosecond timing	Thanushan Kugathasan	D-20-00112
Radiation hard monolithic CMOS sensors with small electrodes for High-Luminosity LHC	Heinz Pernegger	D-20-00114

### Section III. Pixel sensors for imaging

Performance Test for a Pixelated Silicon Sensor with Junction Field Effect Transistor	Kookhyun Kang	D-20-00017
Development of monolithic SOI pixel sensors capable of fine measurements of space and time	Hitoshi Murayama	D-20-00018
New architecture for the analog front-end of Medipix4	Viros Sriskaran	D-20-00029
Performance verification of detecting soft X-rays with a next generation Si CMOS detector for space applications	Naoki Ogino	D-20-00039
Development of a Neutron Imaging Sensor using INTPIX4-SOI Pixelated Silicon Devices	Yoshio Kamiya	D-20-00057
Development of X-ray tri-axial stress analysis system using two monolithic SOI pixel detectors	Toshihiko Sasaki	D-20-00077
Fine residual stress distribution measurement of steel materials by SOI pixel detector with synchrotron X-rays	Ryutaro Nishimura	D-20-00103
X-ray metal material evaluation using an SOI pixel detector	Shingo Mitsui	D-20-00120
Low-Energy X-ray Performance of SOI Pixel Sensors for Astronomy, “XRPIX”	Ryota Kodama	D-20-00130

### Section IV. Strip sensors

Design and Evaluation of Large Area Strip Sensor Prototypes for the ATLAS Inner Tracker Detector	Javier Fernández-Tejero	D-20-00031
Design and performance of silicon strip sensors with slim edges for HPS experiment	Vitaliy Fadeyev	D-20-00033
The Phase-2 Upgrade of the CMS Outer Tracker	Suvankar Roy Chowdhury	D-20-00051
Testbeam studies of barrel and end-cap modules for the ATLAS ITk strip detector before and after irradiation	Frederik Ruehr	D-20-00053
Initial Tests of Large Format Sensors for the ATLAS ITk Strip Tracker	Christoph Thomas Klein	D-20-00056
Humidity Sensitivity of Large Area Silicon Sensors: Study and Implications	Javier Fernández-Tejero	D-20-00060
Measuring the border of the active area on silicon strip sensors	Luise Poley	D-20-00066
Strip sensor performance in prototype modules built for ATLAS ITk	Vitaliy Fadeyev	D-20-00098
Study of CMOS strip sensor for future silicon tracker	Yubo Han	D-20-00099
ATLAS17LS – a large-format prototype silicon strip sensor for long-strip barrel section of ATLAS ITk strip detector	Yoshinobu Unno	D-20-00124

### Section V. Radiation damage and radiation tolerant materials

Analysis of multiple cell upset characteristics for logical circuits in radiation environment	Lili Ding	D-20-00005
Mapping the in-plane electric field inside irradiated diodes	Luise Poley	D-20-00006
Effects of trapped charge on the signal formation on the signal formation and detection efficiency for subsequent pulses in irradiated silicon sensors	Leena Diehl	D-20-00011
Single Event Upset rates in the CBC in CMS	Geoffrey Hall	D-20-00019
Precision spectroscopy of cesium-137 from the ground to 150 m above in Fukushima	Takuya Kurihara	D-20-00026
Measurements of surface and bulk radiation damage effects in silicon detectors for Phase-2 CMS Outer Tracker	Valentina Mariani	D-20-00037

Charge Collection Study with the ATLAS ITk Prototype Silicon Strip Sensors ATLAS17LS	Kazuhiko Hara	D-20-00038
Characteristics of silicon strip sensor irradiated up to a proton fluence of 1017 neq/cm <sup>2</sup>	Katsuya Sato	D-20-00042
Radiation Damage Effects on Double-SOI Pixel Sensors for X-ray Astronomy	Kouichi Hagino	D-20-00043
Electrical characterization of surface properties of the ATLAS17LS sensors after neutron, proton and gamma irradiation	Marcela Mikestikova	D-20-00044
Charge transfer inefficiency increase of the CCD detector induced by proton and neutron irradiations	Zujun Wang	D-20-00050
A Concept for Spatially and Time Correlated Single Event Effect Detection in Semiconductors Using Timepix Type Pixel Detectors	Jan Broulim	D-20-00068
First characterisation of 3D pixel detectors irradiated at extreme fluences.	María Manna	D-20-00080
Experimental Study of Acceptor Removal in UFSD	Hartmut F.-W. Sadrozinski	D-20-00107
Analysis of CSNS neutron-induced displacement damage effects on top illumination planar InGaAs p-i-n photodetectors	Yuanyuan Xue	D-20-00108
Annealing of proton radiation damages in Si-PM at room temperature	Yasushi Fukazawa	D-20-00123
<b>Section VI. ASICs</b>		
PulseDL: A reconfigurable deep learning array processor dedicated to pulse characterization for high energy physics detectors	Dong Wang	D-20-00015
A fully integrated 10-bit 100 MS/s SAR ADC with metastability elimination for the high energy physics experiments	Wei Yan	D-20-00024
JICG CMOS Transistors for Reduction of Total Ionizing Dose and Single Event Effects in a 130nm Bulk SiGe BiCMOS technology	Roland Sorge	D-20-00028
Development of a Front-end ASIC for Silicon-strip Detectors of the J-PARC Muon $g - 2$ /EDM Experiment	Yutaro Sato	D-20-00036
A low-power small-area 6T sram cell for tracking detector applications	Chaosong Gao	D-20-00045
A Distributed Readout Network ASIC for High-Density Electrode Array Targeting at Neutrinoless Double-Beta Decay Search in a Time Projection Chamber	Le Xiao	D-20-00047
Design of a low-noise, high-linearity, readout ASIC for CdZnTe-based gamma-ray spectrometers	Jia Wang	D-20-00065
A Low Noise APD Readout ASIC for Electromagnetic Calorimeter in HIEPA	Ran Zheng	D-20-00067
Prototyping of a 25 Gbps optical transmitter for applications in high-energy physics experiments	Suen Hou	D-20-00075
1.28 and 5.12 Gbps multi-channel twinax cable receiver ASICs for the ATLAS Inner Tracker Pixel Detector Update	Datao Gong	D-20-00093
Development of a Low-Noise Front-end ASIC for CdTe Detectors	Tenyo Kawamura	D-20-00094
FAST: a 30 ps time resolution front-end ASIC for a 4D tracking system based on Ultra Fast Silicon Detectors	Elias Jonhatan Olave	D-20-00115
Radiation-Hard Miniature Optical Engine with High Bandwidth	K.K. Gan	D-20-00121
<b>Section VII. Large scale applications</b>		
Readout demonstrator for a Large-Scale Pixel-Detector conforming to the ATLAS Phase-II Upgrade	Alessandro Gabrielli	D-20-00012
Data-acquisition system developments for ATLAS pixel QA/QC test toward High Luminosity LHC	Kazuki Todome	D-20-00023
Performance study of a MAPS detector prototype based on test beam	Mingyi Dong	D-20-00052
The Silicon Sensors for the High Granularity Calorimeter of CMS	Peter Paulitsch	D-20-00054

Performance of the Belle II Silicon Vertex Detector	Hikaru Tanigawa	D-20-00063
Beam background study for the Belle II Silicon Vertex Detector	Hikaru Tanigawa	D-20-00064
A Prototype for the SHiP Timing Detector	Christopher Betancourt	D-20-00072
The Phase 2 upgrade of the CMS Inner Tracker	Styliani Orfanelli	D-20-00073
Quality Assurance Methodology for the ATLAS Inner Tracker Strip Sensor Production	Miguel Ullan	D-20-00074
ATLAS ITk Pixel Endcap Demonstrator "Ring-0" Construction and Testing	John Matheson	D-20-00100
Studies for Low Mass, Large Area Monolithic Silicon Pixel Detector Modules using the MALTA CMOS Pixel Chip	Petra Riedler	D-20-00113

### Section VIII. Applications in astrophysics, biology, medicine, etc.

64-channel photon-counting computed tomography using a new MPPC-CT system	Hiroaki Kiji	D-20-00014
First application of the super-resolution imaging technique using a Compton camera	Shogo Sato	D-20-00016
Development of the detector simulation framework for the Wideband Hybrid X-ray Imager onboard FORCE	Hiromasa Suzuki	D-20-00046
First demonstration of real-time in-situ dosimetry of x-ray microbeams using a large format CMOS sensor	Samuel Flynn	D-20-00071
Imaging with protons at MedAustron	Christian Irmeler	D-20-00076
Hodoscope with Timepix Detectors for PilsenCube2 Cubesat	Ondřej Urban	D-20-00081
Performance evaluation of GAGG(Ce)/LFS scintillator + MPPC array read-out with ASIC	Daiki Nobashi	D-20-00105
Imaging and Spectral Performance of a 60 $\mu\text{m}$ Pitch CdTe Double-Sided Strip Detector	Shunsaku Nagasawa	D-20-00109
Experimental studies on the charge transfer inefficiency of CCD developed for the soft X-ray imaging telescope Xtend aboard the XRISM satellite	Yoshiaki Kanemaru	D-20-00122
Screening and selection of XRISM/Xtend flight model CCD	Tomokage Yoneyama	D-20-00127
Optical Blocking Performance of CCDs Developed for the X-ray Astronomy Satellite XRISM	Hiroyuki Uchida	D-20-00128

### Section IX. New ideas and future applications

Study of time resolution of low-gain avalanche detectors	Kyoji Onaru	D-20-00025
Design of a Novel Pixelated RGIPM for the 320 kV High-Voltage Platform at IMPCAS	Chengxin Zhao	D-20-00034
Miniaturized read-out interface "Spectrig MAPD" dedicated for silicon photomultipliers	Michael Holik	D-20-00085
First results of the TIMESPOT project on developments on fast sensors for future vertex detectors	Adriano Lai	D-20-00095
Radiation hardness of the Low Gain Avalanche Diodes developed by NDL and IHEP in China	Zhijun Liang	D-20-00097
Layout and Performance of HPK Prototype LGAD Sensors for the High-Granularity Timing Detector	Xiao Yang	D-20-00101
Beam test results of NDL Low Gain Avalanche Detectors(LGAD)	Suyu Xiao	D-20-00102
Design of Low Gain Avalanche Detectors (LGAD) with 400 keV Ion Implantation Energy for Multiplication Layer Fabrication	Kewei Wu	D-20-00110
Radiation Campaign of HPK Prototype LGAD sensors for the High-Granularity Timing Detector (HGTD)	Xin Shi	D-20-00111
LGAD Designs for Future Particle Trackers	Nicoló Cartiglia	D-20-00116
State-of-the-art and evolution of UFSD sensors design at FBK	Roberta Arcidiacono	D-20-00117

## Editorial

The 12<sup>th</sup> International “Hiroshima” Symposium on the Development and Application of Semiconductor Tracking Detectors (HSTD12) was held on December 15 - 18, 2017, at the International Conference Center Hiroshima, Hiroshima, Japan. The primary goal of the symposium is to bring together experts in the design, processing and applications for discussions of experiences, lessons learned and new ideas which are still in the early stage of development. The series of “Hiroshima” symposia has been held traditionally in the Pacific Rim region since the first symposium at Hiroshima in 1993. The proceedings of the symposia have been published in Nuclear Instruments and Methods [1, 2, 4, 5, 6, 7, 8, 9, 10, 11].

To the 12<sup>th</sup> symposium, a total number of 163 participants were registered with 143 contributions, among which 55 were assigned to oral presentations and 88 to posters. The topics of the contributions covered the field of semiconductor detectors and related areas, from technologies and simulations (10 and 2 contributions, respectively), pixel sensors for tracking and imaging (24 and 14), strip sensors (10), radiation damage and radiation tolerant materials (20 total), ASICs (20), large scale application in particle physics experiments (14), applications in astrophysics, biology, medicine, etc. (12 total), and new ideas and future applications (14 total). Following the tradition, the oral sessions were held as plenaries only, while posters sessions were scheduled throughout the entire symposium for presentation and discussion, with coffee, tea, and cookies, during the coffee/tea/lunch breaks.

In past symposia, we were witnessing development of silicon-based tracking devices, shown in Fig. 1. The first generation of this evolution were strip sensors, followed by pixel sensors as the second generation. In this symposium, we have witnessed the birth of silicon-based fast timing detectors in large-scale applications, for the ATLAS and CMS experiments, that will be operational in the mid-2020’s.

The symposium was entertained with a welcome reception in the Conference Center in the evening of 14<sup>th</sup>, Saturday, and with a half-day break, in the afternoon of 16<sup>th</sup>, Monday, used for an excursion to Miyajima island where the world-heritage Itsukushima shrine and the sacred mountain “Misen” are, and with the symposium dinner, in the evening of 17<sup>th</sup> at Hiroshima-city Bunka Koryu Kaikan. The dinner was entertained with the “Kagura” (dance in dedication to the gods) performance by the dancing team “Saniwa Kagura-Dan”, provided by the Hiroshima Convention & Visitors Bureau. The group performed “Yamata no Orochi” - the story of a god who saved the life of an old couple’s daughter to be sacrificed to a big, eight-headed snake (embodied by three snakes in the dance), who the god charmed to sleep with “sake” and then defeated.

The symposium was supported by the Hiroshima Convention & Visitors Bureau, through Ms. A. Sawada of the MICE promotion department, which partially covered the fee for the Conference Center, organized a welcome message from the mayor of Hiroshima City, and the entertainment at the symposium dinner. The symposium was made possible by the excellent contributions of the local organizers, Profs. H. Takahashi and T. Mizuno of Hiroshima University, who not only managed and executed the symposium but also complemented a guest editor, Y. Fukazawa.

Among the 143 contributions, 109 papers were included for publication in these proceedings. Like previous issues, the papers were peer-reviewed with the help of many anonymous reviewers in the field, as well as a special guest editor, D. Bortoletto, in case of a conflict of interest of the managing guest editor, to which the organizers wish to extend their appreciation. We also appreciate the support of the publisher’s editorial team: V. Letizia, L. Li, S. Vikram, and others.

The next Symposium will be held in Vancouver, Canada, in 2022<sup>1</sup>.

Guest Editors

## List of Participants

First name Last name	Affiliation
Pengcheng Ai	Central China Normal University
Kazuyoshi Carvalho Akiba	nikhef
Philip Patrick Allport	University of Birmingham (UK)
Yasuo Arai	KEK
Roberta Arcidiacono	Università del Piemonte Orientale e INFN Torino (IT)
Jongmin Baek	Kyungpook National University
Christian Bepin	University of Bonn (DE)
Christopher Betancourt	University of Zurich
Shudhashil Bharthuar	University of Helsinki
Thomas Billoud	Czech Technical University (CZ)
Maurizio Boscardin	Fondazione Bruno Kessler
Jan Broulim	University of West Bohemia (CZ)
Craig Buttar	University of Glasgow (GB)
Angel Fernando Campoverde Quezada	University of Chinese Academy of Sciences (CN)
Shuxin Cao	International Green Chip Co., Ltd.
Alessandro Cardini	INFN Sezione di Cagliari
Nicolo Cartiglia	INFN Torino
Chufeng Chen	Central China Normal University
Hyosung Cho	Yonsei University
Yannick Manuel Dieter	University of Bonn (DE)
Lili Ding	Northwest Institute of Nuclear Technology
Mingyi Dong	Institute of High Energy Physics, Chinese Academy of Sciences
Takeharu Etoh	Ritsumeikan University
Vitaliy Fadeyev	University of California, Santa Cruz (US)
Yunyun Fan	Chinese Academy of Sciences (CN)
Javier Fernandez-Tejero	CNM-Barcelona (ES)
Leyre Flores Sanz De Acedo	University of Glasgow (GB)
Sam Flynn	University of Birmingham
Giulio Tiziano Forcolin	Università degli Studi di Trento e INFN (IT)
Yasushi Fukazawa	Hiroshima University
Alessandro Gabrielli	Università e INFN, Bologna (IT)
Akiko Gädda	Helsinki Institute of Physics
K.K. Gan	The Ohio State University (US)
Chaosong Gao	Central China Normal University
Vjaceslav Georgiev	University of West Bohemia
Datao Gong	Southern Methodist University (US)
Di Guo	Central China Normal University
Kouichi Hagino	Tokyo University of Science
Geoff Hall	Imperial College (GB)
Yubo Han	Chinese Academy of Sciences (CN)
Kazuhiko Hara	University of Tsukuba (JP)
Kiyoshi Hayashida	Osaka University
Timon Heim	Lawrence Berkeley National Lab. (US)
Ryan Heller	Fermi National Accelerator Lab. (US)
Viktoria Hinger	HEPHY Vienna (AT)
Naoyoshi Hirade	Hiroshima University
Michael Holik	FEE - UWB in Pilsen (CZ); IEAP - CTU in Prague(CZ)
Suen Hou	Academia Sinica (TW)

Fabian Huegging	University of Bonn (DE)
Christian Irmeler	HEPHY Vienna
Akimasa Ishikawa	KEK
Harris Kagan	Ohio State University (US)
Yoshio Kamiya	University of Tokyo (JP)
Yoshiaki Kanemaru	University of Miyazaki
Kosuke Kariu	AcroRad Co., Ltd.
Ryo Kato	Ibaraki University
Tenyo Kawamura	University of Tokyo
Hiroaki Kiji	Waseda University
Jinyong Kim	Kyungpook National University
Christoph Klein	Carleton University
Ryota Kodama	Kyoto University
Gregor Kramberger	Jozef Stefan Institute (SI)
Jiri Kroll	Czech Academy of Sciences (CZ)
Fenglan Kuang	Hunan Zheng Xin Micro Detectors, Limited
Thanushan Kugathasan	CERN
Takuya Kurihara	Waseda University
Svetlana Kushpil	Acad. of Sciences of the Czech Rep. (CZ)
Adriano Lai	INFN
Seungcheol Lee	Kyungpook National University
Jia-Hao Li	National Taiwan University
Zhijun Liang	Institute of High energy physics, Chinese Academy of Sciences
Chao Liu	Northwestern Polytechnical University
Manwen Liu	Ludong University
Peilian Liu	Chinese Academy of Sciences (CN)
Yanwen Liu	University of Science and Technology of China (CN)
Abdenour Lounis	Laboratoire de l'Accélérateur Linéaire
Yunpeng Lu	Institute of High Energy Physics
Maria Manna	Centro Nacional de Microelectronica - CNM-IMB-CSIC
Valentina Mariani	Universita e INFN, Perugia (IT)
John Matheson	STFC Rutherford Appleton Laboratory
Lukas Meduna	Czech Technical University (CZ)
Marco Meschini	INFN, Firenze (IT)
Marcela Mikestikova	Acad. of Sciences of the Czech Rep. (CZ)
Shingo Mitsui	Kanazawa University
Tsunefumi Mizuno	Hiroshima University
Magdalena Munker	CERN
Hitoshi Murayama	University of Tsukuba (JP)
Shunsaku Nagasawa	Kavli IPMU
Koji Nakamura	High Energy Accelerator Research Organization (JP)
Ryutaro Nishimura	High Energy Accelerator Research Organization (KEK)
Daiki Nobashi	Nagoya University Graduate School of Science
Naoki Ogino	Kanazawa University
Takafumi Ohmoto	A-R-Tec Corp.
Kyoji Onaru	University of Tsukuba (JP)
Styliani Orfanelli	CERN
Tadashi Orita	The University of Tokyo
Qun Ouyang	Institute of High Energy Physics
Hwanbae Park	Kyungpook National University
Giovanni Paternoster	Fondazione Bruno Kessler
Peter Paulitsch	HEPHY Vienna

Giulio Pellegrini	Centro Nacional de Microelectrónica (IMB-CNM-CSIC) (ES)
Heinz Pernegger	CERN
Vasilije Perovic	ETH Zurich (CH)
Luise Poley	Lawrence Berkeley National Lab. (US)
Chaoyue Qu	Institute of High Energy Physics
Petra Riedler	CERN
Suvankar Roy Chowdhury	INFN Sezione di Pisa, Università e Scuola Normale Superiore di Pisa
Frederik Ruehr	Albert Ludwigs Universitaet Freiburg (DE)
Hartmut Sadrozinski	UC Santa Cruz
Sai Neha Santpur	Lawrence Berkeley National Lab. (US)
Toshihiko Sasaki	Kanazawa University
Katsuya Sato	University of Tsukuba (JP)
Shogo Sato	Waseda university
Yutaro Sato	High Energy Accelerator Research Organization
Rudolf Schimassek	Karlsruhe Institute of Technology (KIT)
Changwoo Seo	Yonsei University
Fan Shen	Central China Normal University
Xin Shi	Chinese Academy of Sciences (CN)
Kenta Shigaki	Hiroshima University (JP)
Roland Sorge	IHP GmbH
Viros Sriskaran	EPFL - Ecole Polytechnique Federale Lausanne (CH)
Asutosh Srivastava	Jawaharlal Nehru University
Georg Steinbrueck	Hamburg University (DE)
Hiromasa Suzuki	The University of Tokyo
Hiromitsu Takahashi	Hiroshima University
Ayaki Takeda	University of Miyazaki
Hikaru Tanigawa	Univ. of Tokyo
Stefano Terzo	IFAE
Kazuki Todome	Università e INFN, Bologna (IT)
Hidenori Toyokawa	Japan Synchrotron Radiation Research Institute
Toru Tsuboyama	High Energy Accelerator Research Organization, KEK, Japan
Takeshi Tsuru	Kyoto University
Hiroyuki Uchida	Kyoto University
Kirika Uchida	Imperial College (GB)
Miguel Ullan Comes	CNM-Barcelona (ES)
Yoshinobu Unno	KEK, High Energy Accelerator Research Organization (JP)
Ondřej Urban	FEL - UWB in Pilsen
Hui Wang	Central China Normal University
Jia Wang	Northwestern Polytechnical University
Jianchun Wang	IHEP
Zujun Wang	Northwest Institute of Nuclear Technology
Alena Weber	Heidelberg University and Karlsruhe Institute of Technology
Wei Wei	IHEP, CAS
Xiaomin Wei	Northwestern Polytechnical University
Liv Wiik-Fuchs	Albert Ludwigs Universitaet Freiburg (DE)
Kewei Wu	Chinese Academy of Sciences (CN)
Zhigang Wu	Institute of high energy physics
Le Xiao	Central China Normal University
Yuanyuan Xue	Northwest Institute of Nuclear Technology
Kazutaka Yamaoka	Nagoya University
Xiao Yang	University of Science and Technology of China (CN)
Yuzhen Yang	Institute of High Energy Physics, Chinese Academy of Sciences (CN)

Hua Ye  
Masao Yoshino  
Bihui You  
Chengjun Yu  
Iveta Zatocilova  
Hui Zhang  
Ying Zhang  
Yuezhao Zhang  
Cong Zhao  
Yang Zhou  
Hongbo Zhu

DESY  
Tohoku University  
Central China Normal University  
Institute of High energy physics , Chinese Academy of Sciences  
Czech Academy of Sciences (CZ)  
Karlsruher Institut für Technologie  
Institute of High energy physics, Chinese Academy of Sciences (CN)  
Institute of Modern Physics, Chinese Academy of Sciences  
Central China Normal University  
Institute of High Energy Physics, CAS, Beijing, China  
Institute of High Energy Physics
